

Securing Remote Access

Building cyber-agility to manage uncertainty
March 2020

Embracing tech-security during unprecedented times

When it comes to technology, business leaders cannot sit back and wait. Unprecedented events require flexible working arrangements in order to enable organisations to maintain business continuity, for which technology infrastructure and security must be agile and effective.

Ensuring that workforce is enabled with the correct solutions to work remotely is essential. Businesses are resorting to the use of VPN, Proxy and similar such network devices, which could leave systems vulnerable due to external access, along with being prone to cyber attacks.

It is essential for businesses to assess their tech-vulnerability, along with verifying the security of remote access devices in order to avoid an attack, which would cost the business in loss of time, revenue and productivity, not to mention the reputational damage which would be caused.

At Grant Thornton, our team of cybersecurity experts have been working with businesses of all sizes, across industry. We assess any deficiencies in security, capacity and connectivity.

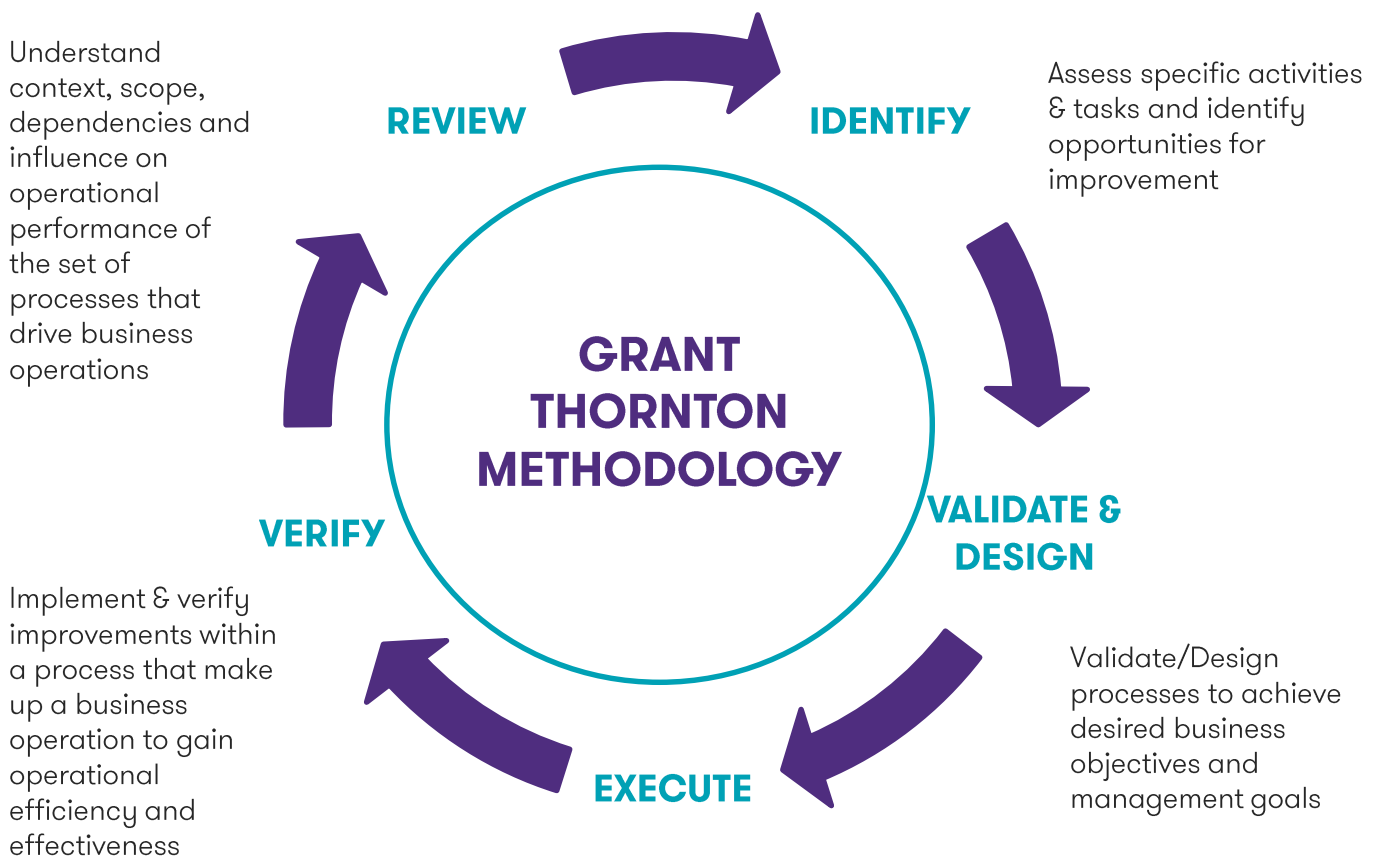

Further, we offer the following solutions to keep businesses secure and on the move:

- Penetration testing and vulnerability assessment of external networks.
- Examining your VPN and external network against:
 - Zero-day vulnerabilities.
 - Lack of Account Lockout.
 - Poor Default Configurations.
 - VPN Fingerprinting
 - Brute-force Attacks.
 - Password-spraying.
 - User enumeration.
 - Weak Security Protocol.
 - Denial-of-service.
 - Segregation.
- Cybersecurity training and awareness
- Cybersecurity compliance gap analysis
- IT and cyber security audit
- Data protection and compliance

Our bespoke methodology is designed to enable organisations to receive an integrated and comprehensive solution which will challenge your network to identify vulnerabilities, whilst exponentially reducing the risk of exposure to attacks and breaches.

Our team offer an integrated and responsive service which will enable our clients to manage their strategy, compliance, business continuity and other key challenges which are essentially required during a crisis.

We offer cybersecurity solutions which are the most competitive and that offer complete protection against malware or phishing threats with fortified tools.
